

Who We Are

Huntingdon Behavioral Health was founded to provide psychiatric and psychological care for older adults residing in assisted living and skilled nursing facilities in Florida. We serve older adults and their families in need of diagnosis and treatment of a mental health condition.

Our program is developed to help your loved ones achieve their highest level of independence and functioning. We offer a full-service behavioral health provider team of over 90 psychologists, psychiatrists, APRN's, and licensed clinical social workers. We serve over 220 skilled nursing, memory care, and assisted living facilities throughout the state of Florida.

Our compassionate providers serve as consultants to your loved one's facility and their attending physicians and staff. They lend their mental health expertise to provide quality long-term care.

Medication Management & Gradual Dose Reduction

When your loved one receives psychiatric care from Huntingdon Behavioral Health, our team of psychiatrists meets regularly with nursing staff at the facility to monitor their medications.

Our top priority is Gradual Dose Reduction (GDR), achieved by closely managing and monitoring psychotropic drug use. We deliver the LOWEST POSSIBLE DOSES to provide your family member with the highest quality of life.

Always Innovating To Better Serve You

Our providers are available to facility clinical teams 24/7.

HIPPA compliant Telemedicine is available to address emergencies and provide quick assessments and guidance.

We are the only behavioral health company to introduce a pharmacy consultant as part of our management team. We want you to feel secure knowing that your family member receives proper medication management and the best clinical care.

Access Our Services

If you feel that your loved one needs our services, notify a member of the admissions or clinical staff. Upon receiving a referral from their primary care doctor at the facility, a psychologist will perform an initial evaluation. This helps to diagnose your loved one properly and provide immediate psychotherapy services, assisting in managing challenging behaviors and referring to a psychiatrist when appropriate. Our psychiatrists then perform an initial evaluation and provide psychiatric medication management when necessary. This collaboration provides continuity of care to promote your family member's wellness.

Why Huntingdon Behavioral Health?

- We have served Florida's long-term care market for over 25 years
- We use an outstanding model that includes psychiatry, psychology, social services, and our commitment to ethical and compassionate business practices
- We maintain rigorous supervision, training, and coaching programs for both our established and new providers, making sure only the best professionals are involved in your loved one's care

Noticeable Benefits That Your Family Can Count On

- Enhanced wellbeing and happiness
- Improved acceptance of care and compliance with treatment recommendations
- Improved participation in facility rehabilitation programs
- Reduce reliance in psychiatric and pain medications
- Increased interest in recreational activities and socialization
- Improved communication with family and assistance in management of stressful transitions involving functional loss of life role changes
- Support with loss/grief, transitions into hospice care, and memory care units
- Decreased agitation, aggressive behaviors, and mood changes associated with dementia
- Expert education and guidance that improves management of any psychological and psychiatric issues your loved one may experience are involved in your loved one's care.
